

Ferns & Petals Sales Analysis

Excel Project

By Manish Divekar

Introduction

This project is a sales analysis dashboard built in Microsoft Excel for Ferns & Petals, a gifting company that delivers presents for occasions like Raksha Bandhan, Valentine's Day, Diwali, Birthdays, and more.

The main objective was to analyze sales data to uncover customer behavior, product performance, and sales trends using Excel's Power Query, data modeling, and pivot features.

Tools & Skills Used

- Microsoft Excel
- Data Collection
- Power Query (Get Data from Folder)
- Data Transformation
- Data Modeling
- Pivot Tables & Charts
- Interactive Dashboard Design

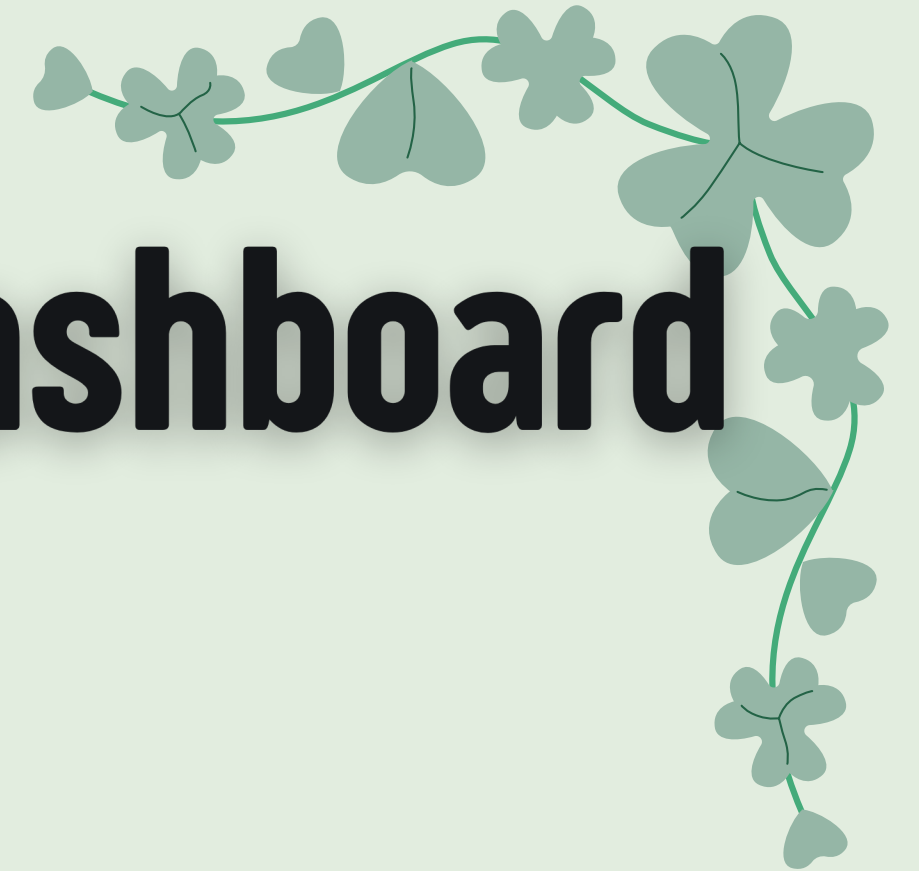

Process Followed

- **Collected** the dataset from GitHub and saved the files into a folder
- **Loaded** the files into Excel using “Get Data from Folder” (Power Query)
- Extracted individual files from binary — no file combining was done
- **Transformed Data:**
 - Created Delivery Days by subtracting delivery from order date
 - Merged Orders with Products to fetch product price
 - Calculated Revenue = Quantity × Product Price
- Built **data model** by creating relationships between tables
- **Created Pivot Tables** and Pivot Charts for business KPIs
- **Designed** an interactive **dashboard** with **slicers** for filters

Key Insights from the Dashboard

 **Total Revenue: ₹35+ Lakhs from over 1000 orders**

 **Average Delivery Time: ~5.5 days**

 **Top Products: Colors, Soft Toys, Plants**

 **Top Cities: Dhanbad, Imphal, Kavali**

 **Occasions with Highest Revenue: Raksha Bandhan, Valentine's Day**

 **Product Popularity by Occasion: Products vary based on the occasion**

Mentorship Acknowledgement

- I followed a YouTube tutorial by Ayushi Ma'am, which helped me a lot in completing this project.
- Her video guided me in understanding how to load data from folders, work with binary files, and build a proper data model in Excel.
- Thanks to that, this project became a great learning experience for me.

Outcome

This project helped me understand the complete Excel workflow — from data loading and transformation to data modeling and dashboard creation.

It gave me hands-on experience in turning raw data into actionable insights, and I'm confident this will help me in real business scenarios as a data analyst.
