

E-commerce Sales Analysis (Amazon Dashboard) – Problem Statement

You are provided with a dataset containing e-commerce sales data, including information such as sales amount, units sold, product categories, cities, states, and transaction dates. The objective is to analyze this data and build an interactive dashboard to uncover key insights related to sales performance, regional trends, and product demand. In the fast-growing e-commerce industry, businesses generate large volumes of sales data daily. However, without proper analysis and visualization, it becomes difficult to identify trends, top-performing products, and regional performance. Therefore, a dynamic dashboard is required to transform raw data into actionable insights for better business decision-making.

Objective

- 1 Analyze e-commerce sales data to identify trends and patterns
- 2 Build an interactive dashboard using Excel
- 3 Track key performance metrics like sales, units sold, and regions
- 4 Identify top-performing cities, states, and product categories
- 5 Enable data-driven decision-making

Key Business Questions

- 1 What is the total sales amount generated?
- 2 How many units have been sold across all categories?
- 3 Which cities contribute the most to sales?
- 4 Which states generate the highest revenue?
- 5 Which product categories have the highest sales and demand?
- 6 How do sales change over time (if date is available)?
- 7 Which products or categories drive maximum revenue?
- 8 How close are actual sales and units to target values?

Challenges

- 1 Cleaning inconsistent or missing data
- 2 Ensuring correct mapping of cities and states
- 3 Designing a visually appealing dashboard
- 4 Making the dashboard interactive using slicers

Expected Outcome

- 1 Interactive Excel dashboard
- 2 Clear visualization of sales performance (charts, maps, KPIs)
- 3 Identification of top regions and products
- 4 Better understanding of business performance

Real-World Use Case

- 1 E-commerce business performance tracking
- 2 Regional sales optimization
- 3 Product demand analysis
- 4 Revenue growth strategy
