

Pizza Sales Analysis – Problem Statement

You have been provided with a dataset from a pizza restaurant that includes details about orders, pizzas, pizza types, and order quantities. The goal of this project is to analyze pizza sales data to uncover meaningful insights related to revenue, customer preferences, and product performance.

Business Questions to Solve

- 1 Calculate the total revenue generated from all pizza sales.
- 2 Determine the total number of orders placed.
- 3 Identify the pizza with the highest price.
- 4 Find the most frequently ordered pizza size.
- 5 Determine the top 5 pizzas based on order quantity.
- 6 Analyze how orders are distributed across different hours of the day.
- 7 Find the total number of pizzas sold for each category.
- 8 Calculate the average number of pizzas ordered per day.
- 9 Identify the top 3 pizza types that generate the highest revenue.
- 10 Calculate each pizza's percentage contribution to total revenue.
- 11 Analyze cumulative revenue growth over time.
- 12 Compare total revenue across different pizza categories.

Objective

Understand customer ordering behavior, identify top-performing pizzas, analyze revenue trends, and support data-driven business decisions.
